Education

The University of Texas at Dallas, M.S. Business Analytics & AI (Data Science Cohort), GPA 3.5 — May 2027

Coursework: Causal Analytics & A/B Testing, Advanced Statistics, Predictive Analytics

PES University, B.Tech, Electronics & Communication Engineering, Bengaluru, India — May 2024

Technical Skills

Languages: SQL, Python (pandas, PySpark), R

Data Platforms: Snowflake, AWS S3, Apache Airflow, Databricks, Git

BI & Methods: Tableau, Power BI, Excel | Data quality & lineage, A/B testing

Professional Experience

NVIDIA Associate Prompt Engineer, Pune, India — Sep 2024 – Jun 2025

- Built data quality check pipelines that held data accuracy at 95%+, catching inconsistencies before they reached downstream models
- Consolidated records from disparate source systems into clean, standardized, ML-ready datasets, reducing downstream model errors
- Standardized reporting across US and APAC teams, giving both regions one consistent view of the data

Center for Robotics, Automation & Intelligent Systems, PES University Research Intern — Jun – Jul 2023

- Built end-to-end Python preprocessing pipelines for raw signal data, ran controlled simulations across 19 test conditions, and documented benchmark findings for senior researchers

Projects

Sentinel: Self-Healing Credit Data Quality Pipeline *Data Quality & Governance* — 2026

SQL · Python · Snowflake · Apache Airflow · AWS S3 · Tableau · LLM (Groq)

- Built an hourly, fully automated pipeline ingesting 3 FRED credit and unemployment datasets through versioned AWS S3 and RAW, CLEAN, and MART layers in Snowflake Dynamic Tables, orchestrated with Airflow
- Defined SQL data quality rules for completeness, validity, and 2-sigma anomalies that quarantine failing rows behind a dashboard-safe view, with an audit log and full lineage from each Tableau number back to its source file
- Stress-tested the gate with an injected invalid record (a 500% delinquency rate): it was flagged on every hourly run for 4+ days with zero manual steps, then passed as soon as the fix propagated through all layers

Consumer Credit Health Scorecard *Financial Services Analytics* — 2026

SQL · Python · DuckDB · Tableau

- Analyzed 16.9M CFPB consumer complaints with Federal Reserve delinquency data across 50 states, using SQL window functions (LAG), rolling 90-day trends, and Z-score anomaly detection to flag emerging credit stress
- Separated a regulatory reporting effect from real credit stress in a national complaint spike; delivered a Tableau dashboard and plain-language memo for non-technical stakeholders

Credit Card Autopay Experiment: A/B Testing Pipeline *Experimentation* — In Progress

Databricks · PySpark · SQL · Python · Tableau

- Designing a simulated 500K-customer experiment testing an in-app autopay nudge, with pre-registered metrics, power analysis, and sample ratio mismatch checks
- Processing experiment data with PySpark in Databricks and applying CUPED variance reduction to reach significance with smaller samples and shorter test windows
- Tracking delinquency and customer service guardrail metrics by segment, with a self-service Tableau readout and a ship or no-ship recommendation memo

Awards & Leadership

1st Place, VizQuest Hackathon (Power BI, 11M records)

Analytics Excellence Scholarship, UT Dallas

Orientation Leader, UT Dallas Student Transition Programs — Jun – Jul 2026
